KEITH GROVES

Product Leader — AI for Legal & Professional Services · Founder · Former Fintech CTO

Oceanside, CA · (760) 300-8629 · keithalgroves@gmail.com · linkedin.com/in/keithalgroves · github.com/keithagroves · hyixteam.com

SUMMARY

Product-minded founder and former CTO who builds AI products for law firms — owning vision, strategy, and delivery end to end. I run **Hyix**, an AI consultancy for personal injury firms, where the product is exactly the problem Vault solves: getting privileged documents into an AI system firms actually trust, then making those documents searchable, extractable, and useful. Deep technical fluency in retrieval architectures, document processing pipelines, and the security and access-control model sensitive data demands — I've usually built the first version myself. Contributor to the **Model Context Protocol** spec, driving consensus among maintainers from Anthropic, Google, AWS, GitHub, and Databricks. Previously led a 7-person team as CTO of a fintech platform that processed $200M+ in transactions.

PRODUCT & DOMAIN HIGHLIGHTS

- **Legal document AI in production:** medical record intelligence for injury firms — 400-page records into summaries, treatment timelines, and chronologies; intake automation; demand-letter drafting. Discovery done by sitting with intake teams, paralegals, and attorneys to map how cases actually move.
- **Sensitive-data trust model:** designed local-LLM pipelines that strip PII from privileged case materials before any third-party model sees them, with audit trails and access controls that hold up to client scrutiny.
- **Retrieval & AI search:** production RAG and semantic search (Pinecone, LangChain, AWS Bedrock); MCP spec work on discovery and retrieval of agent capabilities (skill:// URI scheme, SEP-2640).
- **Enterprise integration strategy:** ship into each firm's existing stack — case management systems, document stores, SSO/OAuth (designed a passwordless Web3Auth rollout) — rather than imposing a new one.

EXPERIENCE

Founder & Product Lead · Hyix LLC

Sep 2019 – Present

AI products & automation for legal and professional services · hyixteam.com

- Own product vision, roadmap, packaging, and pricing for a legal-AI product line: AI opportunity assessments → workflow automation → medical record intelligence → firm-wide secure AI tools → ongoing AI partnership retainers.
- Run a structured discovery-to-delivery framework (Explore → Engineer → Elevate): workflow audits with firm staff, prioritized roadmaps with ROI estimates, then iteration against measured usage. First production automation typically live in under 30 days.
- Built the trust architecture law firms require before adopting AI: local anonymization models in front of frontier models (AWS Bedrock), unified in a single interface so staff never context-switch between tools.
- Delivered enterprise-grade integrations across clients' existing systems — n8n/Make/Zapier orchestration, Supabase, Pinecone retrieval, document extraction pipelines; Docker/Kubernetes/Terraform where high availability is required.

Contributor & Reference Implementer · Model Context Protocol — Skills Working Group

2026 – Present

Open standard for how AI agents discover and use tools, skills, and knowledge · modelcontextprotocol.io

- My skills-over-mcp implementation is cited as foundational work for the official Skills-as-Resources reference implementation and SDK; contributed to SEP-2640, the skill:// URI scheme in the draft Skills Extension spec.
- Spec work is product work: drove alignment across maintainers from Anthropic, Google, AWS, GitHub, and Databricks with competing priorities, and coordinated with the Registry, Agents, and Primitive Grouping working groups.
- Also creator of Enact (enact.tools), an open-source Agent Skills registry — sandboxed execution in Dagger containers, signed and semantically versioned releases.

Software Consultant · Neopolis.ai

Mar 2025 – Sep 2025

- Built an automated AI interviewing platform (React, Django) handling candidate screening end to end; drove build-vs-buy and vendor migration decisions across Vapi, OpenAI Realtime, and LiveKit against measured latency and cost targets.

Security Consultant · Biorbank / BiorVault Aug 2025 – Present

- Security audits across a biobank data platform; designed passwordless Web3Auth authentication integrated with the Moon digital credit card platform — enterprise auth and access-control design for regulated, sensitive data.

Chief Technology Officer · Defispot Mar 2022 – Oct 2024

- Owned the technical roadmap with the CEO and exec team — prioritization, hiring, and shipping-speed-vs-security trade-offs — for a security-critical fintech platform that processed **$200M+** in cross-chain transactions.
- Led a 7-person cross-functional engineering team; defined and shipped multi-chain swap flows across EVM and UTXO chains and an in-house threat-detection system that caught exploits and compliance issues before production.

Director of Education · The League of Amazing Programmers Mar 2016 – Feb 2023

- Grew the program 5× (100 → 500+ concurrent students) by redesigning the product for remote delivery on AWS-based dev environments; owned adoption and retention metrics, instructor hiring, and the teaching playbook.

TECHNICAL FLUENCY

AI / Retrieval: RAG & semantic search (Pinecone, LangChain) · document extraction pipelines · MCP · local LLMs (Ollama, llama.cpp) · PII anonymization · AWS Bedrock · prompt engineering

Platform & Integrations: REST/API design · SSO, OAuth, Web3Auth · n8n / Make / Zapier · Supabase · TypeScript · Python · React · Django · Node.js

Infrastructure & Security: AWS · Kubernetes · Terraform · Docker · Dagger sandboxing · signed releases · audit trails & access controls · CI/CD

EDUCATION

B.S. Computer Science · California State University, Monterey Bay · Former instructor, UC San Diego Extended Studies (four-level Java certificate program, 2018–2023)
