SUMMARY

Agentic developer who builds AI systems businesses actually use — working software in production, not strategy decks. Depth is in the agent layer: Model Context Protocol (MCP), tool discovery and orchestration, local-vs-frontier model routing, and the plumbing that makes agents reliable with sensitive data. Contributor to the MCP Skills Extension spec; my skills-over-mcp implementation is cited as foundational work for the official Skills-as-Resources reference implementation. Previously CTO of a security-critical fintech platform that processed $200M+ in transactions. First production automation typically ships in under 30 days.

TECHNICAL SKILLS

AI / Agents	MCP · Agentic Workflows · Local LLMs (Ollama, llama.cpp) · PII Anonymization · Conversational AI (Vapi, OpenAI Realtime, LiveKit) · LangChain · Prompt Engineering
Languages	TypeScript · Python · Java
Frameworks	Node.js · React / Next.js · Django · Spring Boot · Pyramid
Infrastructure	AWS (Bedrock, Lambda) · Kubernetes · Terraform · Docker · Dagger · Serverless · CI/CD
Automation	n8n · Make · Zapier · Retool · Supabase · Pinecone

PROFESSIONAL EXPERIENCE

Founder & AI Automation Consultant · Hyix LLC

Sep 2019 – Present · AI adoption for businesses: custom agents, workflow automation, AI strategy · hyixteam.com

- Help businesses adopt AI in production — meeting each one where its data and stack actually are. Engagements run Explore → Engineer → Elevate: workflow audit, then agent and automation design, then iteration against measured outcomes. First production automation typically live in under 30 days.
- **Private investigation firm (2025–present):** built local LLM pipelines that strip PII from privileged case materials before any third-party model sees them. Privileged data stays on firm-controlled infrastructure with audit trails and access controls that hold up to client scrutiny.
- Delivered a single internal interface that lets investigators move between local anonymization models and frontier models (AWS Bedrock) without context-switching between tools.
- **Legal and professional-services firms:** automated the workflows quietly eating billable hours, integrated into each firm's existing stack rather than imposing a new one.
- Production integrations across OpenAI, Anthropic, AWS Bedrock, n8n, Make, Zapier, Supabase, Pinecone, LangChain, and Retool; Docker / Kubernetes / Terraform where high availability is required.

Creator & Lead Engineer · Enact

Nov 2024 – Present · Open-source Agent Skills registry for AI tool discovery · enact.tools

- Built an open-source registry that lets AI assistants discover and run CLI tools through MCP — closing the gap where agents could call tools but couldn't find what was available without hand-wired integrations.
- Tools execute inside Dagger containers for isolation; releases are cryptographically signed and semantically versioned. CLI in TypeScript / Node.js; tools declared in YAML with no runtime lock-in.
- Work on Enact directly informs my contributions to the MCP Skills Extension spec (see Open Source below).

Software Consultant · Neopolis.ai

Mar 2025 – Sep 2025

- Built an automated AI interviewing platform (React, Django) handling candidate screening end-to-end, with MCP wiring up the multi-tool AI side.
- Cut voice-AI latency and cost by testing and migrating between Vapi, OpenAI Realtime, and LiveKit in production until the right fit emerged.

Security Consultant · Biorbank / BiorVault

Aug 2025 – Present

- Security audits across the biobank stack; designed passwordless Web3Auth authentication and integrated it with the Moon digital credit card platform.

Software Consultant · Enji.co

Oct 2024 – Feb 2025

- Tuned Python (Pyramid) integrations to bring API response times down and hardened auth flows that had been a source of intermittent failures; helped build the automation stack generating on-brand social and marketing content.

Chief Technology Officer · Defispot

Mar 2022 – Oct 2024

- Led a 7-person engineering team behind a security-critical fintech platform that processed **$200M+ in cross-chain transactions**.
- Designed blockchain integrations across EVM and UTXO chains so users could swap multi-chain in a single flow.
- Built an in-house threat-detection system that flagged exploits, governance attacks, and compliance issues before they hit production.
- Worked directly with the CEO and exec team on roadmap, hiring, and shipping-speed-vs-security trade-offs.

Senior Software Consultant · Stack IT

Feb 2022 – Mar 2023 · part-time, concurrent with Defispot

- Architecture and tech-selection consulting on SaaS engagements; stood up engineering practices (review, CI, deployment) at clients that didn't have them yet.

Director of Education · The League of Amazing Programmers *(Mar 2016 – Feb 2023)* — grew the program 5× (100 → 500+ concurrent students) by rebuilding curricula for remote delivery on AWS-based dev environments.

Java Board Member & Instructor · UC San Diego Extended Studies *(Mar 2018 – Dec 2023)* — designed and taught a four-level Java certificate program completed by thousands of working professionals.

OPEN SOURCE & STANDARDS — MODEL CONTEXT PROTOCOL

Contributor & Reference Implementer · Skills Over MCP Working Group

2026 – Present · modelcontextprotocol.io

- **skills-over-mcp** — early implementation of the skill:// pattern, now cited as the foundational work for the working group's official Skills-as-Resources reference implementation and SDK (@ext-modelcontextprotocol/skills).
- Contributed to **SEP-2640**, the skill:// URI scheme now part of the draft Skills Extension SEP; the proposal's URI-scheme survey treated skills-over-mcp as one of four reference implementations.
- Collaborate with maintainers from Anthropic, Google, AWS, GitHub, and Databricks; coordinate with the Registry, Agents, and Primitive Grouping working groups on overlapping concerns.
- Community: organizer of the AI Paper Club; active in the San Diego AI community.

VENTURES

Founder · Think Machine *(Feb 2023 – Dec 2024)* — K-12 AI/ML education platform (Jupyter, Keras/TensorFlow), run with nonprofit partners to reach kids without access to AI tooling or instruction.

EDUCATION

B.S. Computer Science · California State University, Monterey Bay
